

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1-14. (canceled).

15. (previously presented): A portable terminal with camera, comprising:
a first housing and a second housing which are movably connected to each other;
an image pickup device which is arranged in one of the first housing and the second housing; and

a first refractive conversion lens which is arranged in the other of the first housing and the second housing,

wherein in a first state where the first housing and the second housing are laid on each other, the image pickup device and the refractive conversion lens have an identical optical axis so that a focal length of the image pickup device is converted from a focal length in a second state where the first housing and the second housing are arranged to each other differently than the first state,

said portable terminal further comprising a second refractive conversion lens, and means for replacing said first refractive conversion lens with said second refractive conversion lens,

wherein said second refractive conversion lens is exchangeable with said first refractive conversion lens by a sliding operation.

16. (previously presented): The portable terminal with camera as defined in claim 15, wherein the focal length of the image pickup device is converted into one of a plurality of lengths by selecting one of the first and second refractive conversion lenses.

17. (previously presented): The portable terminal with camera as defined in claim 16, further comprising an audio transmitting and receiving device.

18. (previously presented): The portable terminal with camera as defined in claim 16, wherein the first refractive conversion lens is a zoom lens.

19. (previously presented): The portable terminal as defined in claim 16, wherein said first and second housings are connected to each other by a hinge mechanism.

20. (previously presented): The portable terminal as defined in claim 16, wherein said first and second housings are slidably connected together.

21. (previously presented): The portable terminal as defined in claim 16, further comprising a third refractive conversion lens exchangeable, by the sliding operation, with said first and second refractive conversion lenses, and wherein the focal length of the image pickup device is converted into one of said plurality of lengths by selecting one of said first, second and third refractive conversion lenses.

22. (previously presented): The portable terminal as defined in claim 21, wherein said first, second and third refractive conversion lenses are discrete elements physically and optically separate from each other.

23. (previously presented): The portable terminal as defined in claim 15, wherein said first and second refractive conversion lenses are discrete elements physically and optically separate from each other.

24. (previously presented): The portable terminal as defined in claim 15, further comprising an image-capturing button on a rear surface of one of said first and second housings.

25. (previously presented): The portable terminal as defined in claim 15, wherein a rear surface section of one of said first and second housings contains a viewfinder.

26. (previously presented): The portable terminal as defined in claim 15, wherein at least said first refractive conversion lens is selected from the group consisting of a fish-eye lens, a wide-angle lens, and a close-up lens.

27. (currently amended): ~~The portable terminal as defined in claim 15,~~ A portable terminal with camera, comprising:
a first housing and a second housing which are movably connected to each other;
an image pickup device which is arranged in one of the first housing and the second housing; and

a first refractive conversion lens which is arranged in the other of the first housing and the second housing,

wherein in a first state where the first housing and the second housing are laid on each other, the image pickup device and the refractive conversion lens have an identical optical axis so that a focal length of the image pickup device is converted from a focal length in a second state where the first housing and the second housing are arranged to each other differently than the first state,

said portable terminal further comprising a second refractive conversion lens, and means for replacing said first refractive conversion lens with said second refractive conversion lens,

wherein said first and second refractive conversion lenses are mounted on a rotatable turret, and

said second refractive conversion lens is exchangeable with said first refractive conversion lens by a rotation operation.
